Alcator C-Mod Annual Program Review: Charge to the Program Advisory Committee

Miklos Porkolab

The current five-year C-Mod Cooperative Agreement with DOE extends through October, 2008. We will be submitting our proposal for the next five year contract period in March, 2008. In addition to considering the written proposal, a peer review panel will make a site visit to MIT in May, 2008.

Please provide advice on our plans for this next five year period. Consider the plans in the context of C-Mod's place in the national and international fusion programs, taking into account our potential priority contributions to ITER as well as of other future devices aimed at filling the gaps identified in the recent FESAC Long Range Strategic Plan report.

We are also happy to hear other advice and suggestions.
